### **Crown Recycle Bin 3.0 Now Available**

Crown is pleased to release the 3.0 version of its Recycle Bin utility for EMC Documentum. The new version is fully compatible with EMC's newest content management platform, D6. Now, D6 customers can fully protect their content from accidental deletion.

"Recycle bin is a must-have tool for any Documentum user. Accidental deletion can have potentially disastrous consequences from a compliance and records management perspective," said Jason Holt, Crown's Product Manager for Recycle Bin. The 3.0 version includes greater support for Documentum Retention Policy Services "which will provide peace of mind for any records manager or knowledge worker," notes Holt.

Recycle Bin makes the object recovery process simple and instantaneous. In addition to greatly reducing data loss, it ensures data protection and availability. Using Crown Recycle Bin significantly reduces the management cost associated with recovering lost objects by providing restoration of Documentum content and folders without administrative involvement. Crown Recycle Bin has been re-accredited by EMC Documentum under the "Designed for EMC" program, a mark of quality and value that EMC Documentum customers have long relied on.

Other features of the new release include enhanced administrative functions like logging capabilities, which will give administrators a better view of user actions.
