CROWN ANNOUNCES BULDOSER 4.0 AVAILABILITY

DAYTON, Ohio – March 6, 2008 Crown Partners, LLC, a leading provider of Enterprise Content Management solutions, is pleased to announce the availability of Bulldoser version 4.0. Bulldoser is the preferred Extract, Transform and Load (ETL) solution for EMC Documentum clients. Redesigned with a clean and simple user interface, Bulldoser enables content movement activities between Documentum environments and third party data sources.

“Whether a client is executing a Documentum upgrade, archiving content, or simply performing regularly scheduled content movement, Bulldoser is equipped to handle these movement scenarios with speed and accuracy,” notes Jennifer Johnson, Product Manager for Bulldoser.

The enhanced functionality of Bulldoser 4.0 allows clients to perform comprehensive validation checks between the extracted and loaded content, comply with I18N internationalization standards, interface with D6, extract all versions of an object and manage batches through a new interface.

About Crown Partners: Crown offers clients *a better way* to improve business performance. At a fraction of traditional costs, Crown provides innovative, line-of-business solutions based in enterprise software and platform utilities. The driving force behind Crown’s less costly solutions is its unique business model – a hybrid organization that combines software engineering and services professionals. The innovative Crown engineering team cuts service engagement costs by engineering reusable and licensable solutions to fit the client’s business need. In addition, the market-leading services organization provides cross-industry best practice requirements for the software engineering team. This bi-directional process has resulted in a deeper, more experienced services organization as well as several mature, field-proven software products. Together, these elements provide Crown clients with dramatic process improvements and a distinct competitive edge. Since 2001, hundreds of clients have benefited from licensing Crown technology and deploying 500+ project go-lives.
